

ISI:

Lec-1:

Image - graphic projection
Graphic - something to do with visual

Polygraph
Typography - study of fonts
Photography - inscribing light

Why is graphite called graphite

Graph - inscribing things
Film - light was etched on that film

If image is a graphic representation,
then what's imagination --

What does imagination produce ? ---

SCREEN - synonym for a curtain --
filtering things out
Screen - a display
Interface - allows you to change the
image on the screen

Why is reading fiction pleasurable??

Lec-2:

Freud
How is the writer able to arise the
emotions in us which we didn't even
know exist in us?
What's a psychologist doing with the
theory of storytelling

How is a creative writer able to come up
with different stories

Fact - fiction. ____ truth - lie

Is fiction/creative writer a liar

Freud considers himself incapable of
creative writing
What is the mystery of creative writing

The origin of all stories is - it came down
to me

Freud does not believe in god so he
thinks that if one person can do it, then
all people are capable of doing it

Why is Freud interested in childhood -
play

What's play got to do with imagination -

Freud says that the child who is playing
is a creative writer

The child is not passive like adult but
active

What does a child and a creative writer
share - a child playing is in its own world
and if you want to understand what the
child is doing, you have to ask the child
what he is doing

What world does adults create -
daydreaming

Schizophrenic - creates their own
world

How is daydream different from a nightdream

Daydream - like zoned out

Daydreams are pleasurable

Nothing that is pleasurable comes for free - you have to exchange it for something

Fantasy or daydreaming takes the place of child's play

When adult, you are expected to act within real world

Why does he say a creative writer is a daydreamer

Why are we ashamed of our fantasies becoming public

It's the space where something is being revealed - you are authentic and you feel vulnerable

The desire that is not being satisfied by the world

The content of daydream is not available to you outside the world because you suppress it.

Reality always brings you back from that pleasure

The creative writer masks the relation to ego in your dream

The you going to America in your dream is different from you

It no longer is an egoistic dream . It is masked

Like JK Rowling - people might me against her opinions but they still enjoy harry potter as she has masked herself

Nobody looks bad in instagram - aesthetisation happens

Fore-pleasure - producing as aesthetic feeling - there probably an after

After pleasure - comes from immersing yourself with the day dream - while reading a text

Why we turn pages in a book ?
Nobody's compelling you

Lec-3:

Why people like reading story books and why are some people capable of writing stories?

Creative writing is a site of pleasure .

Difference b/w daydreaming and nightdreaming?

Daydreaming happens while you're awake and conscious, while nightdreaming occurs during sleep and often lacks conscious control.

In daydream you are more in control
We cut off from nightdream when we wake up.

The person doing daydreaming is doing something else which he should not do.

How does freud described daydreaming?

He described a daydreamer as a playing child.

How does Freud theorise the daydreamer -- daydreamer for Freud invokes a playing child

Play	daydream
Child	non-child
No shame	shame
Pleasure(+)	pleasure(-)

Everyone delighted in the child's play.

Why does the daydreamer's pleasure is looked as passive (something not good) and not active?

Why is daydreaming shameful yet pleasurable?

What happens to the configuration of shame and pleasure when we move to the field of creative writing?

Play happens in a real space, child knows its reality but the child also knows that the space for play occupies a different place. Good for his growth, social development.

When your mind is supposed to focus on something real, you are focusing on the fantasies and imagined scenarios. You are not doing anything to make it possible in real life and just dreaming of it.

How do the creative writer know about how to produce pleasure in the reader? The creative writer masks his identity or fantasy and the story does not remain his fantasy or daydream.

Why does a certain kind of identification produce shame?

You are immersed in the story and that immersion is interrupted by judgement

What is the daydreamer saying about himself or herself through the daydream
In your dream you are the perfection that you are not in real

When you snap out of daydream you come in contact with the shocking judgement that you are not enough

Shame comes from thinking that you are lacking

Shame comes from fact that you are actually unable to do it

Freud is talking about creative writer who has overcome shame

A successful creative writer masks the identity.

What's a pose -- (a) the way I want to be captured

-- (b) I do not know how to work upon my skin from inside -

-- An image-my image-will be generous

What is the relationship btw inside and outside in (a) and (b)

(a) Captured - the inside becomes outside i.e. internal becomes external

(b)

A photographer would guide you like chin up chest out, but would not say be joyous or something as only external is presented to photographer

How I want to be seen is the way the kings and the noblemen were captured in the paintings.....

The image is still and stubbornly still
The dead body is a body become a photograph

Lec-4:

What is a pose according to Roland Barthes ?? ---

What's the ques we are interested in ??
What is a pose --

What's the difference

What according to Roland are principle modes to looking at a photograph

1. Studium
2. Punctum

One is way of generalized interest
One is of I like it or I don't

Airport Checkpoint
Photo on Instagram

-What kind of strange object is photograph
On one hand it is an object which you may like or not like
On the other hand it may pierce you

Studium - general , something like a fore-pleasure

Punctum - tied to a singular experience , it is a striking detail, accidental detail

--- Is the disturbance puncture in the image or is it something that happened to viewer of photograph??

Punctum is a detail that sometimes exceeds photographer's intention

-- The studium is of the order of like and don't like

-- Where punctum is of the order of " love "

The photograph itself is in no way animated but it animates me

Oh look at what he's wearing - that's an animation

What is the studium in a photograph --
There is one reading of photograph - historical reading

Barthes says what you can't explain is the fiery look the one of the nun is giving
-

The studium is like a language - the more you spend time with is the more you understand
But the punctum shoots out of the photograph

There are many photographs that has no punctum in them
A photographs punctum is an accident that picks me but also bruises me

What's the relationship btw pose and the punctum?? --

Punctum is something that photographer or model did not intend to happen

--- The Winter Garden Photograph - portrait of Roland's late mother

In all of this I couldn't find an image of what I was looking for until he came upon the winter garden photograph

It isn't in the text and there is a reason for it

He could see or he could resolve what his feelings for mother was like

Photograph is like a certificate of a moment in the past

What produces the punctic effect when he looks at the portrait of his mother -- this photograph not only says "this has been" but also says that "it is no longer".

Lec-5:

When we read a historic fiction.
Question→ How accurate is the representation?

Are we concern with the accuracy of representation of a photograph?
Whats the intent?

Is it a problem for photographer?

Accuracy: Can you produce some action that reaches its target.

Controlled by precision of action.

When we watch films, or read story books, with genre historic fiction

How accurate is the representation

Is this a concern in the case of a photograph? Are we concerned with accuracy of the photograph?
- intent?

Perspective/ Point of view

Difference btw representation and a point of view?

What kind of behaviour is defined as accurate behaviour - you shoot in a way that it hits the target
Can you produce some action that reaches its target

Every single action is highly economised

A sculpture at Madame Tussaud - accurate

Is photography concerned with accuracy at all?

Accuracy is not the only thing, there is an outside of accuracy i.e. aesthetics
There's also emotions

CSI (crime scene) photograph - needs to be accurate

Studium VS Punctum

Barthes introduces two crucial concepts:

- **Studium:** The general, cultural, and intellectual interest in a photograph. It refers to the recognizable elements, like composition or historical context.
- **Punctum:** A personal, unintended detail in a photograph that "pierces" or deeply moves the viewer. Unlike studium, punctum is unpredictable and subjective.

The photograph is coded

What's a code -

Not everyone will be able to understand the photograph

The photograph has a social understanding no matter who looks at it

Scientific facts are objective

Social facts are "as if" they are objective

To recognise a theme in the photograph is a part of studium

When you look at both the photos, you can see a code emerge from them(ph 14, 16)

What is the "field" of the photograph

Roland talks about here??

How does this ability to read the field complete- this space relates to studium

What relation of field with punctum

Coded field/ field of the studium

Photograph and its viewers are present in the field of studium

Punctum punctures the stability of field. The punctum interrupts the smooth reconciliation with the society.

Must we think reconciliation in relation to distraught

What happens when people say something new - resistance, curiosity, hesitation

Curiosity allows you to enter the space of studium.

What kind of field is associate with reading literary text?? --

Btw one ch and another chapter, there is some space , something has happened here, -- whats your relationship to this space ??? --- there are more extreme emotions in this space,

Cinema has a power which photograph at first glance does not have

Attestation - what is a photograph attested to

Photograph of crime scene is attested to that something has happened

Every photograph is attested to "was there" or has been there

The "referent" has been there

In case of photograph, referent is attached to photograph.

A referent can also be an object

It's the fact that it "no longer there", that pricks you

Going to happen has already happened
Punctum puts you in space to anticipate something that has already happened.

Lec-6:

The studium of a photograph can be imagined against a certain kind of field

What's the field of the studium of any given photograph -- set of themes, or general points you can make about the photograph

Annotation on a photograph

Field of the studium -- internal screen

In an image you find in a museum, you mark the battlefield
What is the punctum due to the screen
--

THE MIRROR

The famous text in which Freud recounts how he thought he saw a stranger enter his train compartment just as a violent jolt suddenly opened the door to the lavatory has familiarized us with this "uncanny" feeling, the face of the intruder, not of an other, but of the other in one's self: "I hurried to help him, but was quickly taken aback when I realized that the intruder was none other

than my own image reflected in the mirror of the connecting door. And I remember that this apparition gave me profound displeasure."
If Socrates's mirror is the instrument of self-construction, the revelation of otherness occurs in the flash of the chance reflection and the sideways glance.

Freud	Socratic mirror
Sideways	Straight

Sideways is more like a candid photograph
There's a notion of chance in sideways but not in Socratic

Socratic mirror - you approach the mirror

What does chance do to allow your image to appear as some other? ---

What are you prepared for there (Socratic mirror) and unprepared for here

In the first glance is Freud seeing an image?

In the first image, he doesn't see the mirror (trying to approach the mirror with sideways angle)
He then gradually pieces together the mirror
"I do not find myself where I look for myself, and find myself more often by accident"

than through the exercise of my reason.”

It is Freud's reason that has intervened,
pushed him to believe it's a mirror

Reason

| Chance

Unreason

Madness is reasoning function out of
place

Does unreason means absence of
reason??

Critic Jean Starobinski has said it all
about
the scene in which Rousseau surprises
Madame Basile, his hostess, at the
half-open door (Confessions, L.2).²⁶
Believing himself to
be sheltered from her gaze, he falls to
his knees at the entrance to
her room, “holding out my arms in a
passionate embrace, well sure
that she couldn’t hear me and not
thinking that she could see me.
But there above the fireplace was a
mirror that betrayed me. She
hardly looked at me, hardly spoke to
me, but turning her head
halfway, with one simple finger, she
showed me the braid at her
feet.” On the lovers journey to his
beloved, the mirror serves both
timid and exhibitionist tendencies. The
joy of seeing without being
seen is replaced by the thrill of being
discovered peeking.

In the third case the shame that is there
in the second case elided as the fantasy
was a shared one
Fantasy is what amplifies the pleasure

Lec-7:

Freud's mirror - he thinks someone has
entered his cabin

How does he reason himself that it is
not anybody but him

His reason stabilize around the fact that
it is a mirror

-- pleasure is not in Freud's case

-- Hallucination - fantasy appears as real

Rousseau's - mirror betrays him --
transfers joy of peeking to that of being
discovered (seeing without being seen -
being seen)

In Rousseau's, the mirror acts as a
mediating role in desire/pleasure

Stendhal's - pleasure of seeing without
being seen

Goethe's -- have a shared fantasy

Hug is too much reality and the mirror
allows you to recede from that reality.
Where is shame induced - the 2nd girl in
fantazying about 3 but actually is in 2 and
the guy catches her being in 3

What's the function of the mirror in each
case --

Your fantasy is not contained within
bodily person. It leaks and spreads out
and finds a space in the mirror.

Each of them have an awareness of real things, and each of them has Shame.

Function of mirror in physics -- reflecting light - HOW? rectilinear lines
Catoptric - study of mirror special effects
Anamorphism --

Seen from a certain angle, a portrait is only pieces seen from a certain angle, a portrait is only pieces deformity, dislocation—but from another, unity is reconstituted and the initiated spectator recognizes the laws of a rigorous science behind the optical aberrations. On account of these laws, confusion and the irrational are resolved

In painting like this, the artist brings things like this to light

The spectator's ambiguous pleasure, caught between the fantastic and the logical, comes from a lingering doubt, and perhaps a secret desire, that the magic be real

Freud saw himself as somebody as he wanted to delude himself

Camera means room
Camera obscura - dark room - if you allow light to pass through a pin point you'll see inverted image - allows to project an image

Magic lantern - inverse of camera obscura - like a projector

Mirror simply does not offers reality but also exit from reality

Of all the faces we come across, our own is the one that we know the least.

Lec-8:

How do you look at the mirror ? -- we can ask if it matches with any of the 4 cases

Dog and the bone - freudian case

Narcissist - he kept looking to his reflection until the point he drowns - is he like dog and the bone?

Difference btw freud and narcissist - freud don't like what he saw but narcissists love what he sees.

Freud has a feeling of discomfort when he realises that it was his image --

Without real objects, mirror does not have anything to function

Narcissist dissolving into his image

CINEMA

What's according to Laura mulvey is the pleasure in watching cinema

Scopophilia - pleasure in looking

What's the underlying of this pleasure -- pleasure in being looked at

How do you look at the mirror - it like pleasure in looking

--- When the guy finishes shaving, how does he look at the mirror

Mirror takes something from reality and projects it into fantasy

Narcissist identification

What's the difference between looking at images in a mirror and in a cinema hall?

-- in cinema you don't have control over what you see

How does cinema create a situation for us to be immersed in?

Difference in class and cinema -- no interaction in cinema,

--- The closure of the eyes bring a whole new field of view - dreams

How is the magic of being immersed produced ?

--

There are three looks involved in cinema

1. on of them is foregrounded --> the charcters look at each other
2. look of the spectator

Camera amplifies the pleasure in controlling the object of the gaze .

What's Narcissist Identification??

Mirror is the site if identification. What's identity? - something is something

-- Child's physical ambition outstrips his motor capacity

Child is frustrated as he is unable to bring object under control due to his physical capacity. He then goes to the mirror - What does the child see in the mirror ? The child sees itself as a whole

In the gaze of an adult, what's a baby ??
A child is integrating various outside things into its ego

Lec-9:

What's Laura mulvey theorisation of pleasure involved in cinema --

Diegesis - refers to certain kind of narrative/ like plot of a story or movie
Diegetic circuit --

Is the Diegetic circuit of cinema similar to syllabus to a course

Why go to cinema when you can read the plot online -- cinema produces " immersion " and evokes more emotion

Scopophilia

- It further dwells into fetishistic
- Also narcissistic identification

What's the difference btw an object and me?? -- me have got feelings but object doesn't

Narcissist scopophilia --

When the child looks itself on the mirror it sees itself at the moment as others

see it. -- not only you're seeing an object, but the object is you

What's the difference btw the way the barber looks at the chin and the way you look at your chin

For barber beard and your face is an object

But when you look at it its different

Fetishistic scopophilia - The object of pleasure is outside you

Narcissistic Scopophilia - The object which is outside you resonates with what is inside you.

Lec-10:

According to Laura Mulvey, why do we like watching film -- Scopophilia

Control what you look at

The way Eva looks at the bubble wrap, narrowed down, tells that she was amused

Your eyes are thrilled seeing certain kinds of objects

Scopophilia - fetishistic, narcissistic

What does narcissistic Scopophilia have to do with your enjoyment of that scene

Narcissistic - the object resonates with you - produces an identification with your idea

Fetishistic - the object is outside you, you have control over the object you look at

Mountain dew example -

What does it mean to call mountain dew fetish? --

Every scene has to allow these things(scopophilias) to happen with interruption - this is the trick of cinema

Why is the director's cut longer than the released version??

Handle

Difference btw space in a painting and what simmel call a real space --

Paintings are there to be looked at - your look is the only thing that can enter the space of painting

Difference btw vase and a painting -- vase is not like a painting but it's also not like every other objects of daily use

The vase has a kind of double life :

- Object touched, used
- Object just looked at

This dual nature of the vase is most decisively expressed in its handle. The handle is the part by which it is grasped, lifted, and

tilted; in the handle the vase projects visibly into that real world which relates it to everything external, to an environment that does not exist for the work of art as

The handle allows to manipulate the object which is artistic, it allows you to

manipulate without destroying its integrity

The handle in itself is beautiful - aesthetically pleasing

It has a fetishistic pleasure, i.e. it is aesthetically pleasing and you can manipulate the way you want the handle has grabbed your look

just as the hand is a tool of the soul, so too the tool is a hand of the soul. Pg 3

Lec-11:

What is the principle of handle acc to Simmel?

-The handle participates in the aesthetics of vase

It mediates two spaces - art and reality

Origin of word art - artifice

What's relations btw stuff like art, artifice, craft - it just does not exist but created

--- World of art - World of reality ---

This case for monkeys is like Freud's mirror

" We know that ..."

In case of cutout, we step out of reality and walk into the artistic space
And in case of monkey, they believe that it is real

How is the handle able to perform the function of mediating -- the handle itself has an aesthetic value and also has some practicality -- handle invites the hands but also maintains the quality of a vase

What's the structure of fascination with cinema --

How does the meditation of space of cinema screen and space of viewer mediated between narcissistic and fetishistic scopophilia ---

Narcissistic - when story spills out of screen?

Fetishistic - when you get immersed in story?

In 2nd case the telephone acts as a handle

Fetishistic scopophilia is where your eyes behave as if its your hand

Narcissistic - You invest in the screen and the screen flows into you

Fetishistic - you look at something and your eyes follow - more like wall-e video

Narcissistic identification is like a fantasy

Mulvey makes the two spaces pour into each other

Simmel might provide us the handle but mulvey allows us to decide what can be a handle

Lec-12:

Child ---- Toy. -- A toy is like a passage into certain kind of screen, it's like a mirror

We see more than what light enters our eyes

What's the function of screen? --

Is reality objective and screen subjective?? --

Imaginary screen is subjective

Relation btw subjectivity and objectivity?
- what's the structure btw subjectivity and objectivity

Laura Mulvey -- Structure of pleasure in cinema coincides too much with heterosexual society

TEXT-6

Crowd - a large number of people

What's Poe's obs about crowd? --
People in the crowd don't really talk to each other, they just go their own way, but to reach their destination, they have to go through the crowd.

Crowd is not a community.

Lec-13:

In what way is a handle and interface?

Is touching the primary modality of interaction?

A vase without a handle allows interaction in an aesthetic space
A vase can be like a trigger for daydreaming, it can pull you/grab your attention
Vase compels the quality of studium

When you lift the handle it is pulled into reality, but only for the one who's holding it.

If the crowd is a mirror, what does one find reflected in the crowd?? -- there is some sort of unity

Modernity is like a label for that something ends

Lec-14:

Studium is description of reality. It is kind of cultivated.

Punctum exceeds/survives the reality.
Punctum punctures time.

ChatGPT image doesn't have an actual referent in time.

What is the story of invention of push button and utilization?

The word button is used because it tells about open and closed things. Refer to circuits in Electronics and buttons in clothes. In both, buttons are used for basically closing and opening, the medium is different to which we close or open.

Two metals strike and have a sound, that is how bell works.

Why bell is called a bell? Because it rings.

What is the difference between electric bell and piano?

Piano is for music, and electric bell is for strong/sharp tone.

Piano have multiple buttons for diff tunes but a single button in the electric bell.

People fear of shock because it is dangerous. It hurts afterwards.

Educate about the push button to people about its working, or just tell the person to push the button and the rest will work automatically?

Unfortunately, the 2nd one is more popular.

Pushbuttons give the user the illusion of control. So, without realizing what a push button can do, people just take it for granted and press it.

Why educate people about electricity? Coz it is a defensive take to prevent people from dangerous shocks. The interface to approach the danger has been updated – Switch.

What is the difference between a push button switch and a handle?

Push buttons nowadays look beautiful. Similarly, a Handle makes an object beautiful. Pushbutton acts as a gateway/mediates.

Pushbutton separates people from the reality(circuits etc) but the handle acts

as the medium between the reality and people.

How push button switch is popularized?

Cubist junk:

Picasso: Artist, mostly makes portrait images. Mostly distorted faces.

Lec-15:

Discussion on two statements today:
Button- window into electricity: reduces fear by increasing knowledge.....0th statement

It is similar to “Go out and pet and it wont bite”.

You push the button, we do the rest....1st statement : It also overcomes fear but in a different way by maintaining the distance from the blackbox. People dont know about the blackbox complexity. This involves trust, that just trust us, and push the button.

[When you push the button] there is a tremendous power behind the button.....2nd statement

The transition from 1st to 2nd statement is to refrain people from not taking the button granted. It can involve shocks. People can misuse, the value of the button decreases.

But even the 2nd statement have to actuate itself as people wont believe it until they see it.

Buttons are inside a box for the person to think that something might happen, he would rethink about the consequences in due time of the process of opening the box and then pressing the button rather than just smashing it. Box basically acts as a barrier.

To advertise the effortlessness (for the 1st one).

“You” is the focus. You push the button.

There is no magazine, no safety in old guns in museum which are different from today’s guns.

Samuel Colt discovered Safety revolver. Who is safe? The one who is firing.

TV Set: Older TVs vs Modern TVs difference?

Older ones were bulky and required more space. Interface was complex, but now it is very easy. Today, we don't have to push the button anymore, we just have to give the direction to alexa that play “chhota bheem” on pogo.

The frame of the TV set is similar to that of the handle. It is just that the handle is attached to the object.

Remote acts as an interface between the user and the TV. Without the remote, it is useless.

Lec-16:

What is a slot machine?

3 windows and a handle type thing, and when we pull it, it spins and generate

random numbers. It is an electronic gambling device.

Why gambling? People have hope of winning. People gamble not just because of money, but also for the nature of fun(the zone).

Is it because of only money?

Excitement? involvement/identification with what you’re gambling?

The Famous Dog Experiment (Story of Pavlov)

Pavlov was originally studying **digestion** in dogs when he noticed something unusual:

- Dogs would **salivate** (produce drool) **not just when they saw food**, but even when they saw the lab assistants who fed them.
- This meant the dogs had **learned** to associate food with the people who usually brought it.

Cheating in exam hall **analogous** to slot machine? Yes/No? Why/Why Not?

Cheating is like a heist.

Why It’s Similar

1. Risk & Reward Factor:

- In both cases, you **take a risk** (cheating/spinning the slot).
- If successful, you **get a reward** (good grades/jackpot).
- If caught, you **face consequences**

(punishment/loss of money).

2. Uncertainty of Outcome:

- You don't know if you'll get away with cheating, just like you don't know if you'll win on a slot machine.
- The result depends on **luck, skill, and external factors** (like the invigilator's strictness vs. the randomness of slot reels).

How we make sure to transform the uncertainty to certainty in gambling?

1. Reading who've done it before
2. Asking other gamblers
3. Experience

So what's the interface in slot machines? Handles? Pushbuttons? Touch Screens?

Why to move handle -> pushbuttons -> Touch screens? To ease the playing, to make the playing faster, reduces mechanical involvement. We moved from mechanical to electrical.

Difference between putting notes and putting coins in slot machines?

Coins = Old-School, Slower Play, could be jammed

Notes = Modern, Faster Play, Easier(more risk) to Spend More
A player can insert a single \$20 bill instead of 20 separate \$1 coins to load credits instantly.

So all of these things are just making things easier for us to play.

Principle of slot machine? You put money and there is a chance of winning.

A **Taylorist** is someone who:

- ◆ Applies **scientific management(breaking tasks into smaller tasks)** techniques in industries.
- ◆ Focuses on **maximizing efficiency and productivity.**
- ◆ Supports **rigid work structures and strict task specialization.**

Temporal Discipline: Making efficient use of time

Lec-17:

Design angle of slot machine? What they want and how they are able to achieve it?

They want to increase time on device. By reducing complexity of the device so that users can engage more and more. By reducing outside perturbations.

How reduce outside perturbations?

Giving them headphones.

How gambler achieves isolation? They put some money or their belongings on other machines as if someone is coming there.

Or they can choose a corner machine.

Or you include everything in the machine like billing, ordering food etc(stay in the seats).

Stop counting time.

Control Payout schedule.

Casinos use reward-based music and animations to keep players immersed, there is no natural lighting.

More time to the money.

Mathematicians have interest in Gambling. Why? Because of probability.

Cashout– leaving the casino and changing the tokens into money.

Winning too much too soon too often. Someone have to lose for you to gain money.

What gambling really about? Or what is the zone that gamblers talk about?

Gambling for them isnt really about only money, it basically for the duration which gambling gives them.

There is no separation between machine and gambler, it almost an extension. "Machine-gambler"

Time is countable or Time is duration. Difference?

Countable Time = "How many units of time?" (Objective, numerical)

Duration = "How long does it feel?" (Subjective, experiential)

If we plot time on x axis, it can be counted, it is quantified. There is assumption we take that there is separation between the two intervals. But in the 2nd one, time is intensity.

When you loose track of time, you enter from countable time to time as duration. How do clocks allow time to be counted?
Zeno's paradox

Compare binge watching to gambling.

Lec-18:

Interkom- haven't developed by govt., used in indonesia

Ham radio or Amateur radio- for non commercial exchange of messages
Difference b/w amateur radio and radio station:

In amateur radio, it has exchange of messages(bilateral communication). In radio station, there is a professional broadcasting entity.

Difference between amateur radio and telephone.

In telephone only 2 people can talk to each other.

amateur radio often involves a community.

How Interkom evolved?

Interkom networks didn't just grow; they also divided and reproduced. This happened for several reasons, including overcrowding, the desire for different types of content or communication styles, and the need for more privacy. For privacy, different content.

Example from today's world:

Discord(different rooms for conversation etc), Whatsapp groups etc.

Interkom- completely community based network. Users contribute materials and technicians to handle all the stuffs. This is what also makes it different from other communication technology.

How people gets on interkom?

Author sees some people working with cables and all and this is how he got to know about it. Overhearing. People who want to use some different interesting way of communication other than the traditional one.

Interrkom activities often resemble community events, like gatherings and celebrations.

2 Quotes on page 9 in Interkom pdf

Interkom creates a distinction between on-air personality and offline personality, like people use different names and chat and all.

Interkom can be seen as an amateur version of radio, where people can create their own local version of stardom.

They have a good sound system which enables the users to control their sound.

Difference b/w interkom and today's social media groups

Interkom corners people(engage in a flirtatious talk)

When interkom people meet in real-world, its like cosplay(because they know their on-air names only).

Interkom is like fantasy screen but when they meet, its not merely a visual image.

Today's social media is not stable between the off air and on air.

Lec-19:

What is the photograph what is the theory of photograph

- capture moment
- evidential equality

What photograph capture counts as a fact ?

What is a moment?

What is the nature of that moment we capture ?

When you look at a photograph it invoke memory recall you were there

Also a way police catch thief. Evidence

How to do you know it is a selfie ?
Article

Act of clicking the selfie proves it to be a selfie with even a phone

Selfie can introduce a problem of satisfaction

The camera isn't capturing who you are?

You have the final verdict despite of others opinion.

Narcissistic- identification

Fetishistic- objectification

Both are forms of pleasure

Looking at your Selfie is Narcissistic or Fetishistic??

What does a child looking at in the mirror before the identification

First view is of objectification that turns into identification later

By moving his body it is able to control the reflection in the mirror

Selfie have a currency on the social media more Interaction in which faces appears

The image exposes the gaze
Screen is a function of desire--gaze

You look at what you desire-- how to relate it with selfies

A selfie with a scenery you want to show the feelings that the scenery invokes in you

Does look come first or desire ??
Desire is unconscious
Looking is a function of our own desires

While daydreaming you gaze at your imagination

What is the difference between the look of wonder and curiosity
Wonder desire stays there
Curiosity desire moves through

Desire is Constructive
In some selfie you sometime sees a aspect of yourself that you don't want to look at or identify.

Lec-20:

What is
Marwick -- Economy of attention

Selfie is a gaze onto oneself

Polfrushus

Point if selfie is like hey what's going on
Selfie

Economy of attention

Phatic sociality

What's the difference btw gaze and seeing something -- gaze has depth
-- our visual field is not the field of info - gaze

-- seeing some information

Eyes perform in functions of desire

Gaze is the field of desire

Desire shows you stuff

Subject without a body

In this kind of situation does your position have stability to it?
Where are you in your dream - you're out there somewhere and venturing

The dream is the first sight where you practice unanchoring of you subjectivity

How do people keep track of where they are?

There is a space of fantasy and one of reality

Who is the person who is unable to keep track of where they are??
Schizophrenic, psychotic zone

It is in relation to others that self is produced

Your existence comes from
acknowledgement of sociality
Stain - you get to know about your
subjectivity

A crime scene investigation -- police
officer believes that they know the
criminal better than the criminal knows
them

How is all of this exploited in the context
of the screen ??

When barth looks at image of her
mother a stain pops out of the image..

CVDazzle
Picasso

Stain is not only visual matter but an
imaginary one

What the relation btw rhythm and
subjectivity

Signature is a repetitive gesture
We can track subjectivity with regards to
repetition

Gaze -- field of desire --- field of power

People who go into protests is also kind
of repetitive activity which marks you
subjectivity.

Lec-21:

Truth seems to be located in different
bodies
Which truth prevails depends on person

Difference btw someone who registered
punctum in photograph and someone
who doesn't

The chappal in the photograph is
punctic

What is in the photograph for barthe but
not for us --

Detaching your subjectivity -- signature
Screens and such technology extends
our subjectivity

Risks of circulating your subjectivity on
these platforms --

Interruption in your subjective
investment can arise feeling of rage,
anger like your watching TV and
someone passes in front of the TV at
some interesting moment

Daydream is interrupted from within

How social media overcome the shame
of daydream

Creative writer knows how to overcome
the shame- making who they truly are
You can't fully dissociate from your past

Roland barthe sees the subjectivity of
his mother in the photograph this it is
not presented for us as it will be
surrounded for us

What is intelligence ?? -- it depends
1st aspect -- Concept of Intelligence changes with emergence of Calculating machine

2nd aspect -- a change in intelligence is which led too emergence of Calculating machine

Which aspect is correct??

You can have intelligence without calculating machine

Lec-22:

Why we study history: so that we dont repeat the mistakes done in the past.
History is Causal explanation of present, how we got here.
History helps us identify patterns.

Enlightenment→ Two pictures come in mind→ Gautam Buddha and The Enlightenment period.

Enlightenment period: The age of enlightenment in history when human use logic and reasons to understand and improve the world. (in 17th-18th century in Europe)

How science become dominant?

When did people understood that we should start teaching science in schools?

Before science, what was the source of knowledge? → Tradition, culture etc.

Enlightenment is when a human frees (liberation) himself from the self-imposed bondage.

Parents made us believe that there is god. They didn't force us.

There is theological difference between the nature as a work of god and nature as the worker of god.

The inner essence of this pdf tells us about calculations that it is not just a tool for mathematics but as a symbol for reason, power and ideology.

Adam Smith – famous economist, his work is utterly markable.

He had the most famous example: division of labor which is division of big tasks into smaller part and give each person a part.

Similar to the pin making example, which was predominantly famous in the british era, which is lots of workers involving and doing similar repetitive tasks.

De prony was inspired by this idea of Adam smith, and he was desired to make logarithmic and trigonometric table based on this idea. It was supposed to support France's new **metric system** (which replaced older measurement systems).

He described it as a monument. A monument to reason and precision.

*Triangle: the top part of triangle– formulae (done by lets say 1-5 people)
The middle part of triangle– initializations (done by 7-8 people)

The bottom part of triangle—
Calculations (done by 70-80 people)

In the Enlightenment, calculation meant intelligence, analysis, and reason. Even moral decisions were thought of as a kind of calculation (like weighing right and wrong).

But by the 19th century, calculation began to mean routine, mechanical, even boring work.

It shifted from being something **elite scientists** did to something **low-paid laborers** did. The meaning of intelligence itself started to change. Originally, doing calculations was seen as a mark of genius (e.g., Newton, Gauss).

Later, it became a "**mechanical**" job done by underpaid workers — often women, especially in astronomy or statistics.

Prony's project symbolized this change: combining genius-level math with simple labor.

Genius and Labor work:

We relate genius as some sort of power of mind but relates labor work with body(physicality).

2 statue of liberty are there.

Manufacturing in France and British then:

In France— craftsmanship, symbolism over efficiency, government involvement
In British— Machines and Productivity, Mass production, private sectors

France manufacturing was based on luxury, excellence but British manufacturing was based on efficiency.

Jacquard: **Jacquard fabric is a highly textured fabric** with patterns that are woven, rather than printed into the fabric.

Some thinkers were worried that outsourcing calculations to everyone could lead to losing moral responsibility.

But we still do it. Why?

Calculations build character— the discipline and duty.

Lec-23:

Before 18th century: Calculation is associated with genius.

18th century(France): De Prony described new metric system(log and trigo tables). He introduced tables as monuments.

19th century(England): Babbage. Calculation began to mean routine, mechanical, even boring work.

After 19th century:

Difference between high iq and genius. High iq is a scientific term associated with science but genius is god gifted. Genius is value association not the association of fact. Genius stands apart but high iq stands in front.

Difference between Babbage and Deprony view?

British scientist **Charles Babbage** saw Prony's project like a **factory**: lots of workers doing small, repetitive tasks — like in pin-making (which Adam Smith famously discussed). Babbage saw it much more than just division of labor. He looked at it as they could be turned into producing something (profit-based). Prony, however, saw it more like **luxury craftsmanship**, like Sèvres porcelain or Gobelin tapestries: expensive, rare, and refined. He only saw the division of labour and mimicked it.

The difference between the Babbage and Deprony is just like the difference between Eiffel tower and telecom tower. Only 2 copies of Deprony's work were produced — just like monuments.

Morality associated with calculations.

You learn to do basic mathematics stuffs not to apply it on higher mathematics but to help build your concentration and discipline

Lec-24:

I. Introduction to Interface Concepts

- Our notions of interface seen so far.
- **Quote: "We enter a different world."**
(This suggests that interacting with an interface changes the user's experience into a new environment.)

II. How Interfaces Work

- **Conceptions of interface in switches:**
 - Hides the mechanisms.
 - Shows only the effect.
- **Non-digital interfaces:**
 - Handled manually.
 - Designed to be dealt with physically (by hand).
- **Interface emerges from reality:**
 - "Interface grows out of the reality of the usage."
 - (Meaning: Interfaces are shaped by how people actually use tools or systems.)

III. User at the Edge of Interface

- **User's role at the boundary of the interface?**
 - **Territorializations** → something stabilizes.

- *(Possibly meaning: Users 'claim' spaces at interfaces, making them stable zones.)*
- Interaction between **reality, fantasy**, and **interface**.

IV. Data and Patterns

- **Data** → Concept of **Big Data**?
- **Big Data** involves identifying **patterns** from massive amounts of data.

V. Code and Rules: Then vs Now

- **Earlier ("Before") Model:**
 - **Input (I/P) → Code → Output (O/P)**
 - Programmer **provides specific rules** to the computer to get a desired result.
 - **Specific I/P to specific O/P.**
- **Current Model ("Now"):**
 - Building complex applications today requires approx **100 lines of code**.
 - **Question:**
 - *"How is it that the lines of code have diminished so*

much?"

- *(Implying a shift in programming practices, probably due to automation, libraries, frameworks, etc.)*

- **Big Data systems:**

- You don't specify detailed rules.
- Instead, you simply provide the **input** and **desired output**.
